PROJECT NAME	Smart Solutions for Railways Using IOT

PROJECT OBJECTIVES

- Using the Web application, a user books a ticket based on the availability of the seats by giving the general required information.
- Once a user clicks on the submit button, a QR code is generated with a Unique ID and the data is stored in the Cloudant DB with that Unique ID.
- Users can save the QR code for further process.
- In python code, a Ticket collector can scan the QR code and extract the information from the QR Code i.e., Unique ID. With that Unique ID, data is fetched from the Cloudant DB, if it is not found, then it displays Not a Valid Ticket.
- Also, the live location of the train will be published to IBM IoT platform using python code
- The train location can be tracked from a Web Application.

To accomplish this, we have to complete all the activities and tasks listed below:

- Create and configure IBM Cloud Services
 - Create IBM Watson IoT Platform and Device
 - Create Node-RED service
- Develop the Python Script
- Develop a web Application using Node-RED Service.
 - Testing the Web UI by giving the required inputs
